

IN THE CLAIMS

Please amend the claims as follows:

1. (original) An electric lamp (1) comprising:

an elliptical reflector body (3) comprising a light emission window (5) and surrounding a light chamber (7), and having a first focus (F1) in the light chamber and a second focus (F2) outside the light chamber,

a reflector coating (9) provided on the reflector body, which coating reflects visible light;

a light-transmitting cover (11) connected to the reflector body at the area of the light emission window;

a light source (13) arranged in the light chamber in the location of the first focus,

characterized in that the light-transmitting cover is provided with means (15) for blocking infrared (IR) radiation.

2. (original) An electric lamp as claimed in claim 1, characterized in that the means for excluding infrared radiation comprise an infrared-reflecting coating.

3. (currently amended) An electric lamp as claimed in claim 1 ~~or~~ 2, characterized in that the cover is red or amber in color.

4. (currently amended) An electric lamp as claimed in claim 2~~or~~  
3, characterized in that the reflector coating transmits infrared  
radiation.

5. (currently amended) An electric lamp as claimed in claim 1,~~2,~~  
~~3 or 4~~, characterized in that the cover is an elliptically or  
parabolically curved cover.

6. (original) An electric lamp as claimed in claim 5,  
characterized in that the cover is elliptically curved and has two  
focuses ( $F_{lid}$ ), each focus being located on the light source.

7. (original) An electric lamp as claimed in claim 5,  
characterized in that the cover is parabolically curved and has a  
focus ( $F_{lid}$ ) which is located on the light source.

8. (currently amended) A light projector comprising an electric  
lamp (1) as claimed in ~~any one of the preceding claims~~claim 1, and  
an optical fiber (17) whose end (19) is located in the second focus  
( $F_2$ ) of the elliptical reflector (3).
